

J2534 Vehicle Flashing, Reprogramming Package

Have you spent hours trying to repair a driveability or emission problem and couldn't resolve the issue? Many of these problems can only be repaired thru flashing. AVI can give you the training you need so you can be prepared when you come across a problem that cannot be fixed without a software update.

In this program, John Thornton explains what J2534 pass thru is, how it works and what it can and cannot do. He tells you why it is important information to know even if you are not planning on doing reflashing. John shows you the tools you will need and the problems you can fix with these tools. You will also learn how to use OEM websites to find reflash information, the profits that can be made with a J2534 tool and where to find J2534 tools. This class has over 2.5 hours of hands-on demonstrations on GM, Ford, Chrysler and Toyota.
