

MACS AC Clinic

Like any other system on today's vehicles, A/C systems are constantly being updated with new technology and service procedures. AVI has teamed up with the Mobile Air Conditioning Society (MACS) to offer this clinic to bring you up to speed on the latest in mobile A/C systems.

In this program, Paul DeGuseppi, lead trainer for MACS discusses all the changes in A/C service including the new low charge systems and J-2788. He covers compressor service and replacement such as oil balancing procedures for GM, Ford, Chrysler, Honda & Toyota as well as hybrids & electric A/C compressors. Paul explains the GM Epsilon Platform, what you need to know about the IBEC with the combo BCM/Fuse Panel and databussing.

This program shows you how reprogramming and re flashing fits into the world of A/C. It covers hose repair and hose making, new tools such as new leak detectors and J-2788 and new refrigerants and systems on the horizon. Paul also provides over 30 minutes of MACS quick tips including the cooling systems affect on A/C, import testing, diesel, fan clutches and more.

MACS A/C & Cooling Systems Spec Guide covers:

- * 1996-2010 import & domestic vehicles
- * Component locators, full fluid capacities, serpentine belt routing diagrams, ATC trouble codes & more
- * 590 pages
